JITS Optimal9

1. OVERVIEW

1.1 Introduction

This document provides a comprehensive guide to using the HFC Portal, a centralized platform designed for managing API transactions, system configurations, and user operations within the core banking ecosystem. The purpose of this manual is to assist users in understanding the functional model of the portal, how to configure its components, and how to effectively interact with different modules.

The HFC Portal offers a standardized interface that simplifies integration with core banking systems, enabling secure, efficient, and consistent communication. Through the portal, users can manage transactions, configure system roles, monitor user sessions, set up API connections, and handle encryption for sensitive information.

By following the instructions outlined in this document, users will be able to:

- Navigate the portal menus and understand their purposes.
- Configure and manage connections with core banking systems.
- Securely generate and manage access credentials.
- Effectively operate API transactions and monitor system activities.

This introduction serves as a starting point for both administrators and end-users, providing the necessary foundation for working with the HFC Portal in day-to-day operations.

1.2 How To Start HFC Portal

LOGIN APP

1. Use the browser in the list: Chrome, Microsoft Edge, Opera, Firefox
2. Enter path

Figure 1. Path

3. Enter Account name and Password and click Login

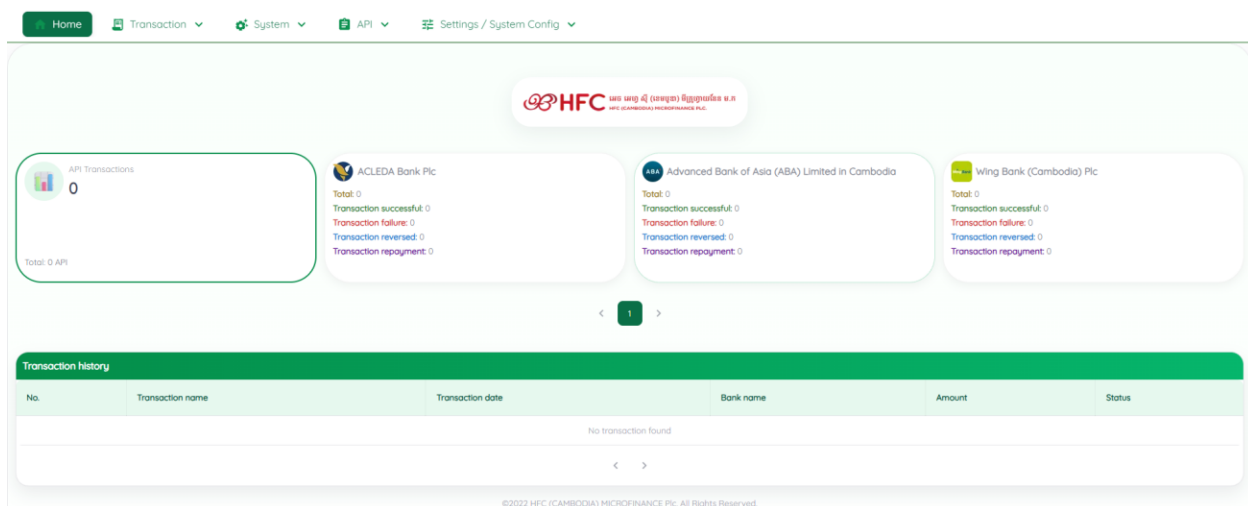

Figure 3. Dash board

In which:

Field name	Description
No.	Row number.
Transaction Name	The actual function name in Core API that is executed to perform the transaction.
Transaction date	The exact date and time when the transaction was executed.
Bank name	The name of bank do transaction.
Amount	The amount of money involved in the transaction.
Status	The result of the transaction (Success or Failed or Reversed).

2.1.2 How To Work With “Dashboard”

There are two ways to access the Dashboard screen, :

- After login success, Portal will auto show dashboard screen.
- Click Home button in Menu.

2.2 USER MANAGEMENT

2.2.1 Create User

To create a new user, please do the followings:

- Click the menu System/ User Management.
- Click Add button.
- Input fields:
 - + User name
 - + First name
 - + Middle name (optional)

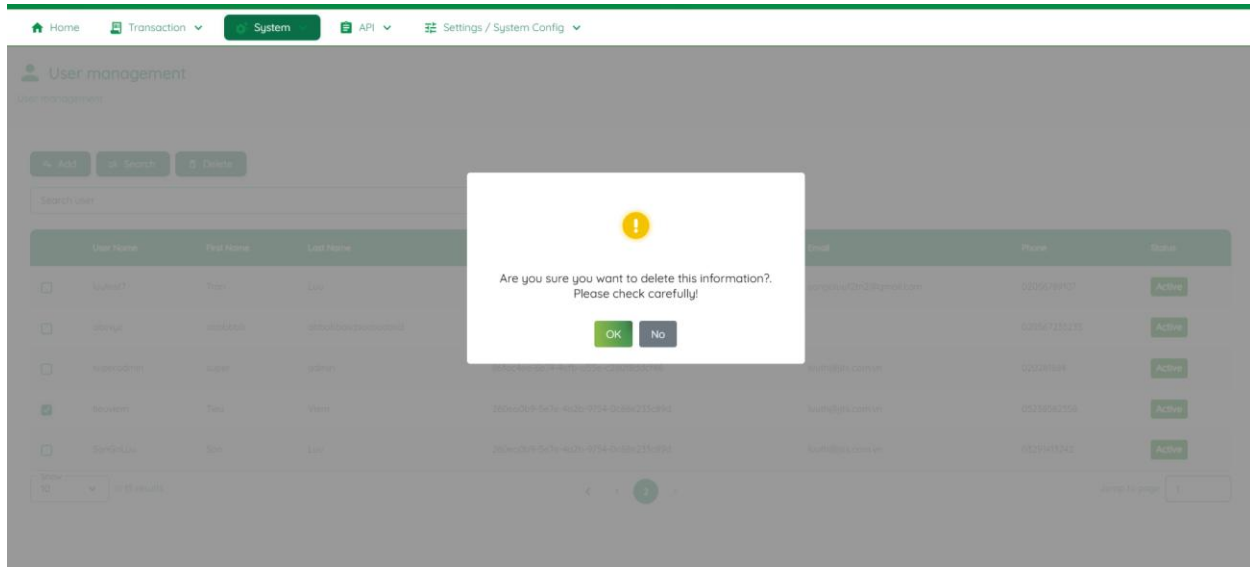

Figure 11. Delete user

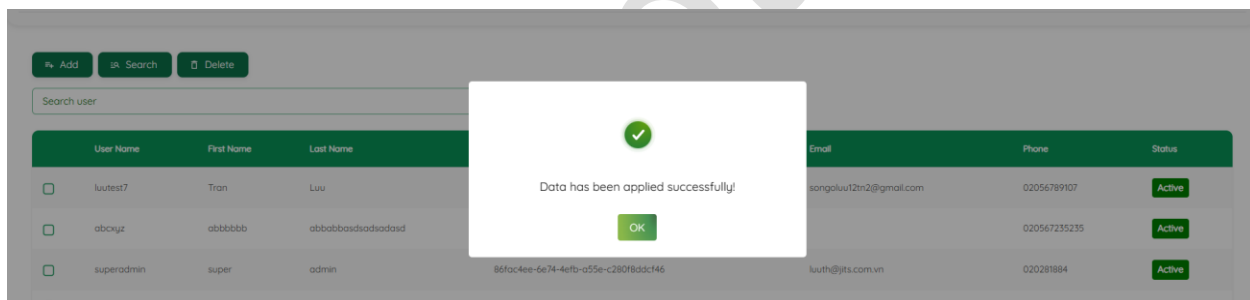

Figure 12. Delete user success

In which:

Field Name	Description
Username	Unique login name used to access the system.
Password	Secret key required for login (auto generate when creating a new user).
First Name	The user's given name.
Middle Name	The user's middle name.
Last Name	The user's family name or surname.
Gender	The user's gender (e.g., Male/Female).
Email	Contact email address of the user.
Phone	Contact phone number of the user.
Address	Residential or contact address of the user.
Author	The creator of the user account (e.g., admin, system).
Status	Current account status (e.g., Active, Inactive).

User Level	Defines the system level assigned to the user (e.g., 6-Administration).
Using Policy	Usage policy applied to the user (e.g., Back Office Policies default).
User Role	Role(s) assigned to the user, defining access rights and permissions (e.g., Administrator, Manager, IT Staff).

2.3 ROLE PROFILE

2.3.1 Set Role For User

To set role for a user, please do the followings:

- Click the menu System/ Role profile.
- Choose tab User Assignment.
- At left table, search and choose one or more user want to set role.
- At right table, select the role for user.
- Click button > to Assign one or click button >> to Assign many.
- Check result.

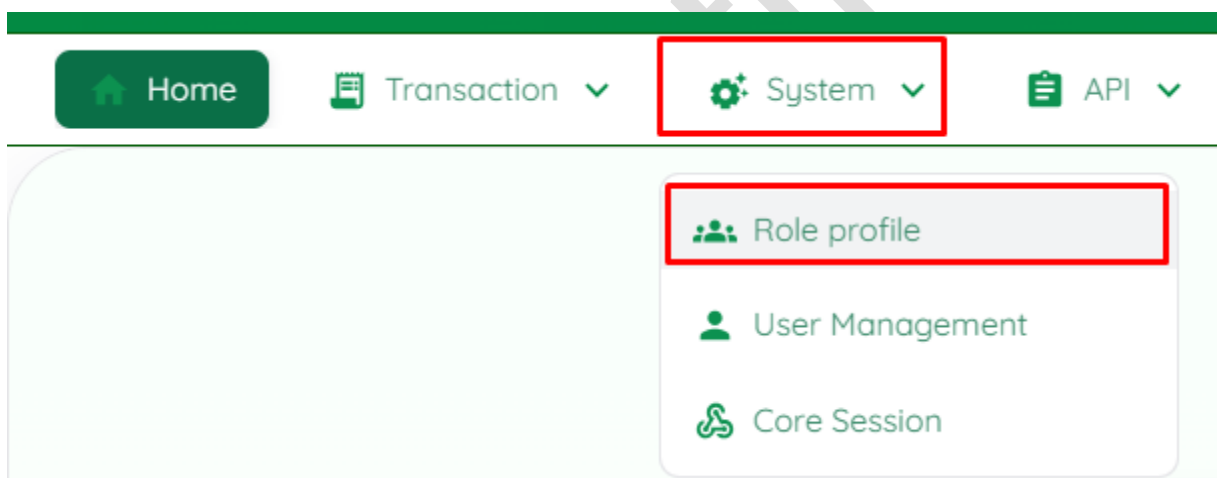

Figure 13. Click the menu System/ Role profile

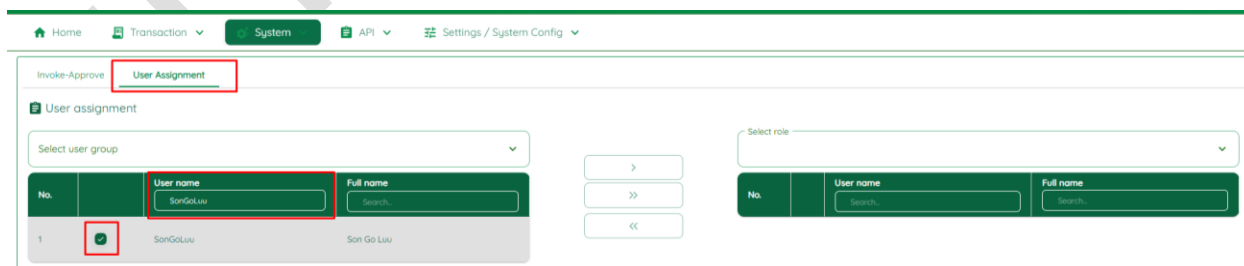

Figure 14. Choose user

The screenshot shows the 'User Assignment' page. On the left, there is a table with columns 'No.', 'User name', and 'Full name'. The first row shows user 'SonGoLuu' with a checked checkbox. To the right of the table are three buttons: '>', '>>', and '<<'. On the right side, a dropdown menu 'Select role' is open, showing a list of roles: 'Administrator', 'API management', and 'Super Admin'. The 'Administrator' role is currently selected.

Figure 15. Select role for user

This screenshot is similar to Figure 15, but the '>' button is highlighted with a red box. The 'Select role' dropdown is still open, showing the same list of roles. The table on the left remains the same.

Figure 16. Click assign button

2.3.2 Role-Based Menu Permissions

This feature allows administrators to manage menu visibility and feature permissions for each role in the system. This configuration determines which menus a role can access and whether certain actions are allowed.

- Self Invoke:

The Self-Invoke option controls whether the selected role is permitted to view and access specific menus.

- + Checked (✓): Menus assigned to the role will be visible to users under that role.
- + Unchecked: The menu will be hidden and inaccessible for that role.

- Reset Password:

The Reset Password permission applies only to the User Management module.

This setting defines whether users in the selected role are allowed to perform password reset operations.

- + Checked (✓): The role can use the Reset Password feature.
- + Unchecked: The role cannot reset passwords for any user.

Please do the followings:

- Click the menu System/ Role profile.
- Choose tab Invoke-Approve.
- At left table, choose the menu.
- At right table, find the role name and set permission for each role :
 - + Enable or disable Self-Invoke to manage menu visibility.
 - + Enable or disable Reset Password (User Management only).
- Check result.

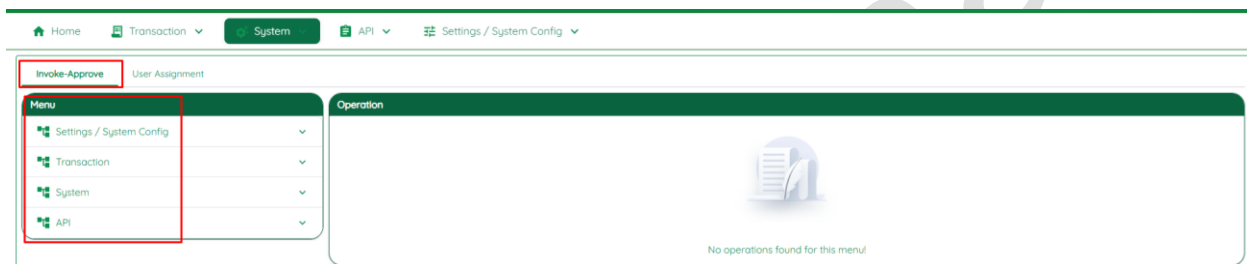

Figure 17. Choose tab Invoke-Approve

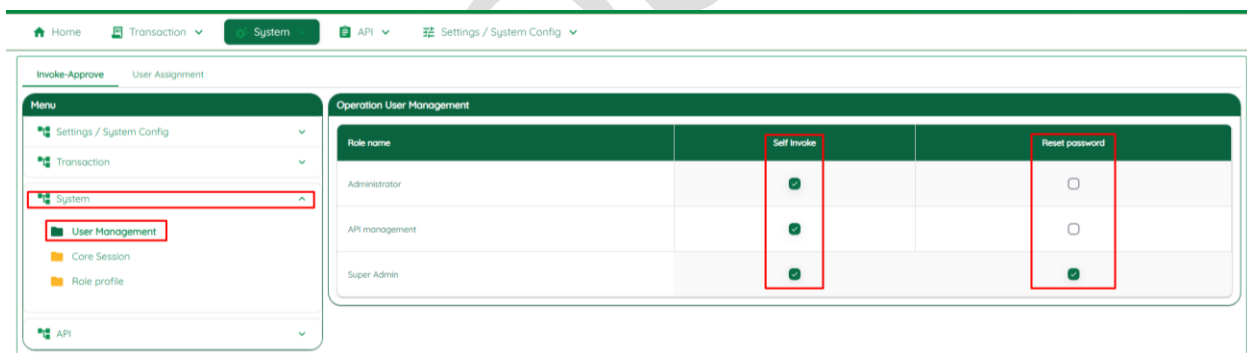

Figure 18. Set permission for each role.

2.4 Create Certificate For Bank Access To Our Core Banking

2.4.1 Information required for certification

- To enable secure access to the Core Banking System by authorized banks (including the current bank and agent bank, if applicable), the following information is required for certification: Client ID, Client Secret, Scopes.
- After create Client ID, Client Secret and Scopes, give these to user to create static token and use this token to login core api and call other api.

2.4.2 Create Client ID, Client Secret, Scopes.

Path

To create new Client ID and Client Secret and Scopes, please go to the path menu: API => API Management

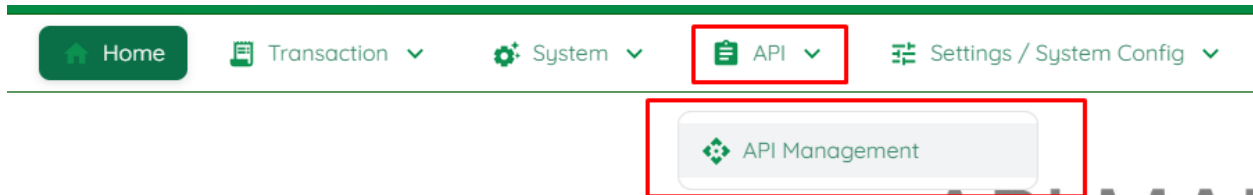

Figure 19. Path menu API Management

Then, on the API Management screen, click Add button to go to Add screen.

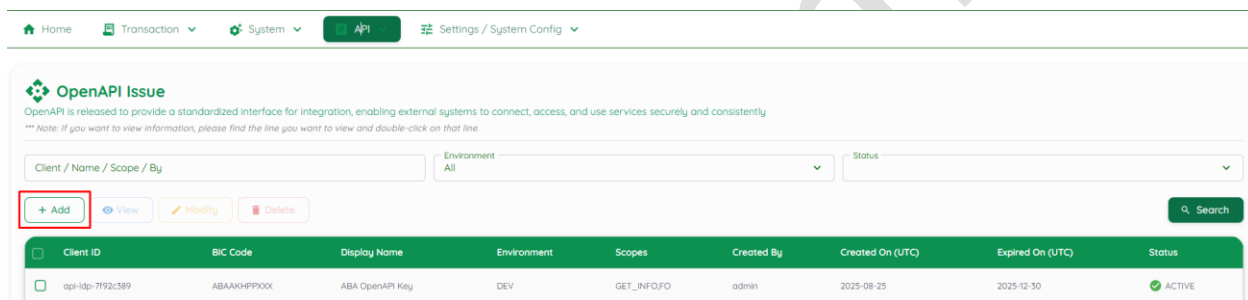

Figure 20. Add button

Step by step

(Ignore this line if creating for internal bank) If creating for Agent bank, tick box Use Agent Bank to show option for Agent bank.

Each Client is uniquely identified by the combination of Client ID and Environment.

On the Add screen, please follow the steps:

- ❖ Basic Information:
 - Input new Client ID.
 - Input External Device ID (E.g: LOS_SYSTEM, required for signature verification when call Logout user).
 - Input display name for Client ID.
 - Select the environment will be apply (DEV, UAT, PROD).
 - Input Scopes (type of transaction this Client can call, e.g., GET_INFO, FO), click tag to apply data and can be add more.
 - Set Expired On (Expiration date when the Client ID will no longer be valid).
 - Set status for Client ID (Active/Inactive).
- ❖ Authentication Details:
 - Input Access Token Max Number of Uses (optional), it's a maximum number of times an issued token can be used before it expires or becomes invalid.

JUST - IN - TIME SOLUTIONS

Address: 3rd floor, Sunrise City - North Towers, 27 Nguyen Huu Tho Street,
Tan Hung Ward, District 7, Ho Chi Minh City, Vietnam
Tel: (+8428) 36 205 249 Fax: (+8428) 36 205 248 Web: www.jits.com.vn

JUST-IN-TIME[®]
SOLUTIONS

- Input Access Token Issued IPs (optional), it used to set list white IP allow access to our system, this list IP is semicolon-separated lists (example: 180.77.15.55; 180.77.15.57).
- Input Client Secret Trusted IPs same as Access Token Issued Ips (optional).
- Input Secret description (optional).
- Set Expired On (The expiration date/time of the client secret).

Click Save to generate the Client Secret and External Secret Key.

The Client Secret is used for certification, while the External Device Id and External Secret Key are used for logout verification.

Please copy and store them securely. The External Device Id and External Secret Key will only be displayed once and cannot be retrieved afterward.

- If creating for Agent bank:
 - o Tick box Use Agent Bank
 - o Lookup Bank
 - o Search and choose agent bank
 - o The information will auto generated.

Figure 21. Add new Client ID and Client Secret for internal bank

Figure 22. Add new Client ID and Client Secret for agent bank

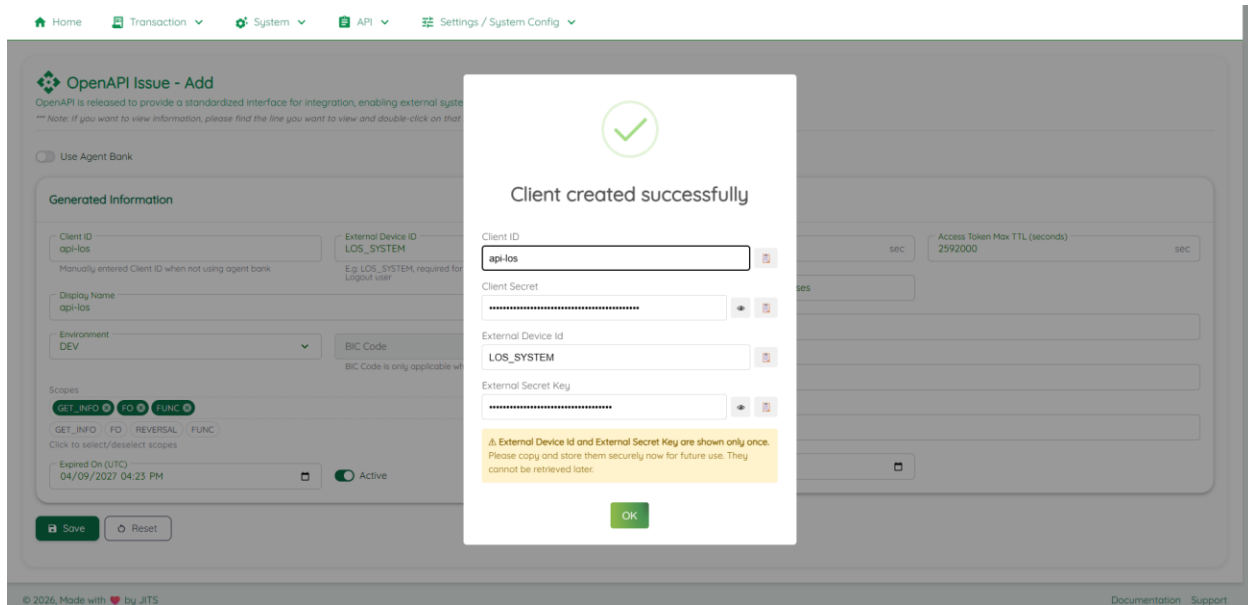

Figure 23. Client Secret is auto generated

2.4.3 Config the white list IPs allow access to our system.

This configuration allows to define a list of trusted IP addresses that are permitted to access the system. Only requests originating from these whitelisted IPs will be accepted, while all others will be denied. This ensures that API access is restricted to authorized networks, enhancing security and preventing unauthorized connections.

Path

To config the white list IPs, please go to the path menu: API => API Management

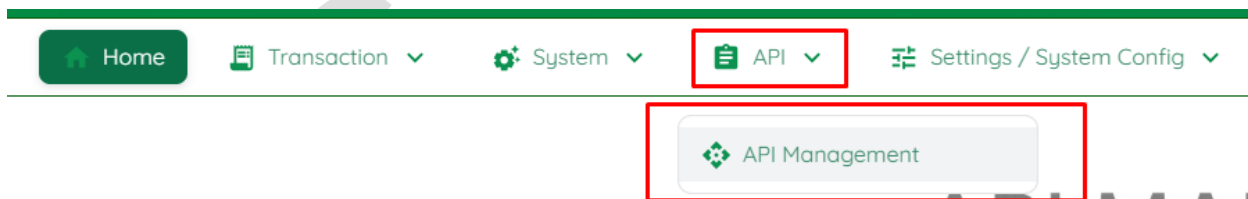

Figure 24. Path menu API Management

Step by step

On the API Management screen, IP whitelisting can be configured in two ways: during client creation (Add – when creating a new Client ID) or during client modification (Modify – when updating an existing Client ID).

Please follow the steps:

- ❖ In case Add – when creating a new Client ID:
 - Click Add button.
 - Input data into the fields on the screen as instructed in the section above.
 - At 2 fields Access Token Issued IPs and Client Secret Trusted IPs, please input the list IPs (the semicolon-separated lists, ex: 180.77.15.55; 180.77.15.57).

- Click Save.
- ❖ In case Modify – when updating an existing Client ID:
 - Select the Client ID want to modify.
 - Click Modify button.
 - At Modify screen, input the list IPs into 2 fields Access Token Issued IPs and Client Secret Trusted IPs.
 - Click Save.

In which:

❖ Client Details Section

Field Name	Description
Client ID	A unique identifier automatically assigned to the API client application.
Display Name	A human-readable name for the client application, used for easier identification.
Environment	Indicates the environment where the client is used (e.g., DEV, UAT, PROD).
Status	Current status of the client.
Scopes	Scopes specify what type of transaction the client can call (e.g., GET_INFO, FO).
BIC Code	Bank Identifier Code, representing the bank or financial institution associated with this client.
Created By	The user account that created this client.
Created On	Date and time when the client was created.
Expires On	Expiration date when the client key will no longer be valid.

❖ Authentication Details Section

Field Name	Description
Access Token (TTL - seconds)	The time-to-live (TTL) of an issued access token, expressed in seconds
Access Token Max (TTL - seconds)	The maximum possible lifetime of an access token, in seconds.
Access Token Max Number of Uses	Maximum number of times an issued token can be used before it expires or becomes invalid.
Access Token Issued IPs	The list of IP addresses from which access tokens were requested or issued. Helps with security tracking.
Client Secret Trusted IPs	Specific IP addresses that are allowed to use the client secret for authentication.
Client ID	The same unique identifier of the client.
Client Secret	The secret key assigned to the client, used in combination with the Client ID to authenticate API requests.
Secret Description	Description information for the secret.
Number of Uses	How many times the client secret has been used so far.
Secret Expires	The expiration date/time of the client secret.

2.4.4 View And Modify API Client And Rotate Secret

View

- Click the menu API/ API Management.

2.5 GENERATE PASSWORD ENCRYPT

2.5.1 Information Of Generate Password Encrypt

"Generate password encrypt" menu is used to securely encrypt your passwords for safe storage and transmission.

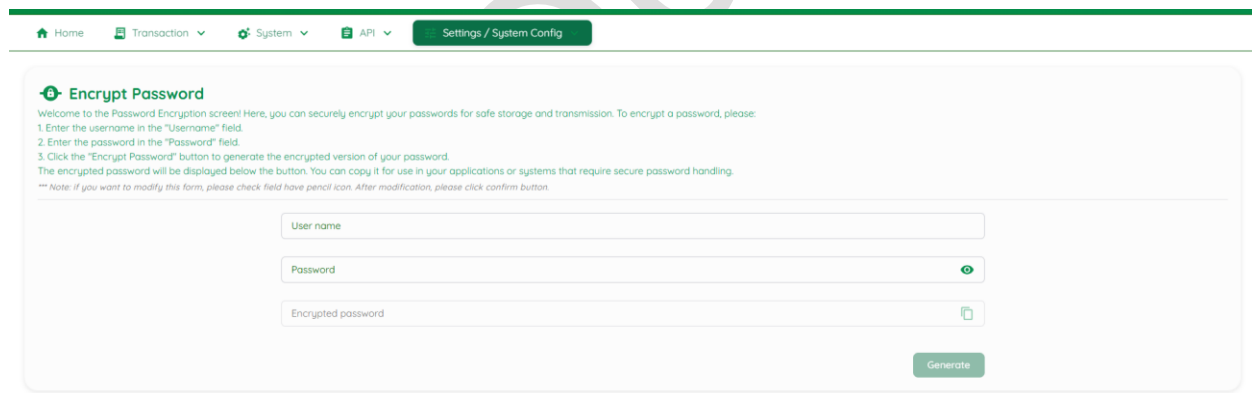

Figure 29. Encrypt Password screen

In which:

Field Name	Description
User name	The username associated with the password you want to encrypt. This is used as part of the encryption process.
Password	The plain text password that you want to encrypt for secure storage and transmission.
Encrypted password	The output field that displays the encrypted version of the entered password after clicking Generate. You can copy this value and use it in applications or systems that require encrypted credentials.

2.5.2 How To Work With “Generate Password Encrypt”

“Generate password encrypt” function is used to securely encrypt your passwords for safe storage and transmission. To encrypt a password, please:

- Enter the username in the "Username" field.
- Enter the password in the "Password" field.
- Click the "Encrypt Password" button to generate the encrypted version of your password.
- The encrypted password will be displayed below the button. You can copy it for use in your applications or systems that require secure password handling.

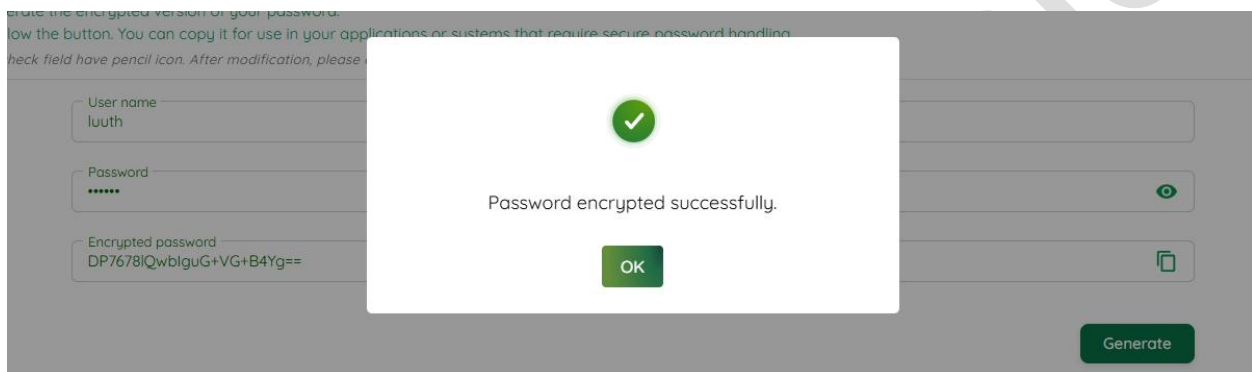

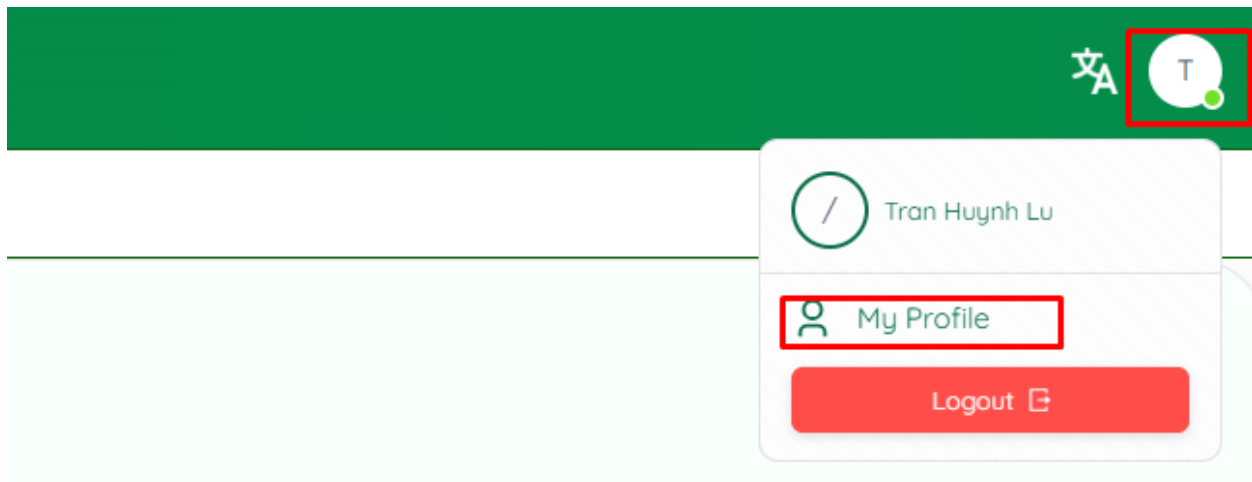

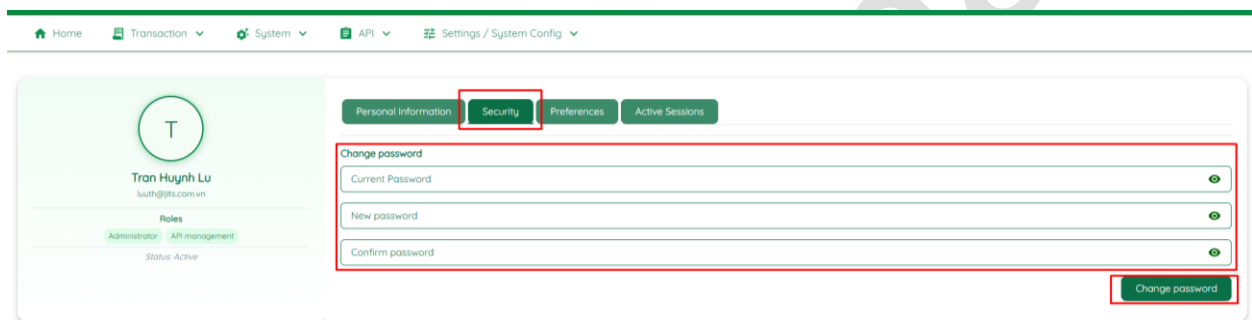

Figure 30. Password encrypted successfully

2.6 CHANGE PASSWORD AND FORGET PASSWORD

2.6.1 Change Password

To change your password, please do the followings:

- Click the avatar, choose My Profile menu.
- Click Security tab.
- Enter Current password.
- Enter New password and Confirm password.
- Click Change password.

*Figure 31. Choose My Profile**Figure 32. Change password*

2.6.2 Forgot Password

If you forget your password, you can use feature Forgot Password.

Please confirm that your account is registered with your email address, if not yet please contact to admin to update your email address or use Reset password feature.

Please do the followings:

- At Login screen, click Forgot password.
- At Forgot password screen:
 - + Enter your username.
 - + Enter the email address you used to register your account.
- Check mail to get new password.
- Login your account with new password.
- Change new password.
- Login again.

2.8 SMTP SETTINGS

2.8.1 Email configuration

To set up your email sending service via SMTP (use for Create user, Reset password), in here:

- **SMTP Server:** Your email provider's SMTP server address. Example: smtp.gmail.com
- **SMTP Port:** The port number used by your provider. Common value: 587 (for TLS)
- **Send Email:** The email address that will be used to send emails from the system.
- **Test Mail:** The email address to receive a test message and verify the configuration.
- **SMTP Password:** The password for the sending email account. (For Gmail, use an App Password instead of your regular password.)
- **Enable TLS:** Check this option to enable secure email transmission (recommended).

The following step:

- Click the menu **Settings/ System config**.
- Click menu **SMTP Settings**.
- At tab **Email configuration**, filled your information.
- Click **Test connection** to send a test email and verify that everything is working correctly.
- Click **Save Configuration**.

Service setting
Configure your account settings, including notification preferences, security settings, and other account-related options.
*** Note: if you want to modify this form, please check field have pencil icon. After modification, please click confirm button

Email notification
